October 30, 2007

Dear David Epner and Paul Brancato,

We'd like to thank you for your efforts on our baffle polishing and gold coating. These parts, and especially the processing steps were a challenge for fabrication. Your flexibility and perseverance were keys to working towards successful parts and maintaining our assembly schedule. These parts have been integrated and look great. They are integral components to the baffling scheme of our instrument.

The engineering and design dialogue between us was an important part of the process. We appreciate your help in getting us towards a feasible fabrication process.

We look forward to further successful efforts between us.

Sincerely,

Farshid Azad  
Mechanical Engineer
